

JANDEL Engineering Ltd
Model PN01
P/N Typing Unit

The Jandel Engineering model PN01 **P/N Typing Unit** plugs into a standard Jandel four point probe so that the probe can be used to measure whether a material is P or N type. It is not necessary to use the Jandel four point probe electronics. The probe unit that would normally plug into the Jandel electronics can instead plug into this typing unit to provide a simple system for determining P or N type. It includes an AC adaptor.

This image shows the back of the unit where the 5 pin DIN connector coming from the Jandel four point probing system can plug into the P/N Typing Unit. The connector on the right side is where the AC adaptor plugs in.
